

Answer's / Explanation's

1. An escape character is a back slash (\) followed by any character. We can use them inside a string like "Birds\"s".
2. Escape character n can be used to move the next character or string after n to a new line. Escape character t can be used to give a tab space between characters.
3. "4 \\ 2" which is equal to "4 \ 2".
4. Because we used double quotes to enclose string.
5. We can use multi line string to use newlines without \n escape character.
6. 'e'
'Hello'
'Hello'
'lo World!'
7. 'HELLO'
True
'hello'
8. ['Remember,', 'remember,', 'the', 'fifth', 'of', 'November.']
'There-can-be-only-one'
9. rjust()
ljust()
centre()
10. lstrip() and.rstrip() to remove spaces from beginning and end respectively.
